HALO for Security, IT & AI Leadership

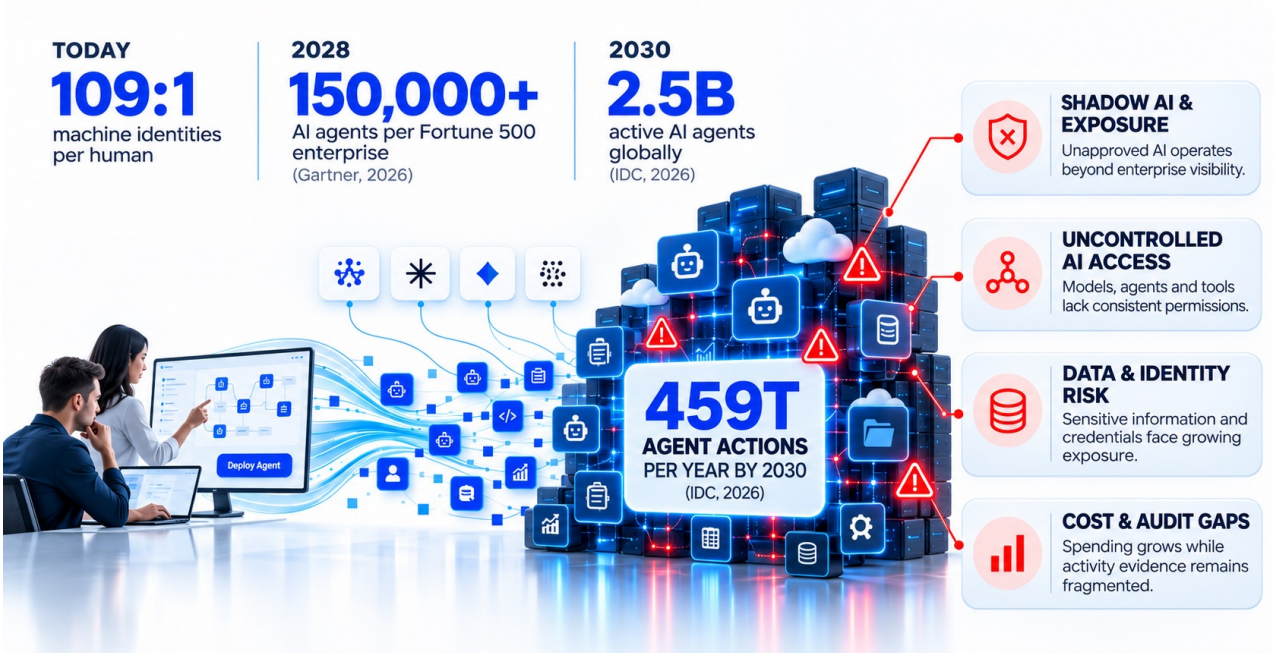

by OmniTrust

Take Control of Enterprise AI

Discover AI. Enforce Trust. Audit Activity. Optimize Performance & Spending.

AI adoption is accelerating across employee devices, browsers, applications, models and agents. OmniTrust Halo delivers a vendor-independent AI control plane to discover and assess AI usage, enforce security policies, secure model and tool access, audit activity and optimize spending - without disrupting existing AI workflows.

AI adoption is outpacing enterprise control - Shadow AI creates blind spots, unauthorized access threatens sensitive data, fragmented logs limit accountability, and LLM consumption drives unpredictable costs.

OmniTrust's Halo AI Control Plane turns AI governance into operational control, giving enterprises visibility into AI use, enforcement over data and execution, and the freedom to optimize models, infrastructure and cost.

Discover

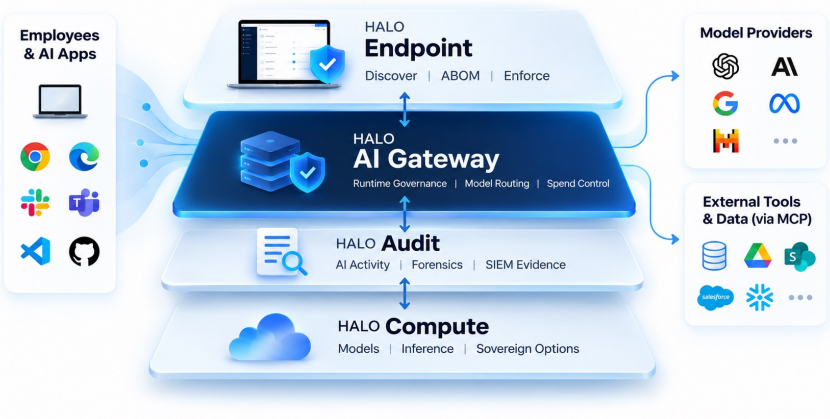

Discover AI Across Your Enterprise

Discover & Assess - Halo Endpoint: Find authorized and Shadow AI, build an ABOM, identify exposure and establish a baseline for enterprise governance.

Control

Govern & Enforce AI Use

Enforce & Secure - Endpoint + Gateway: Apply AI usage policies, protect sensitive data and control access to approved models, agents and tools.

Optimize

Secure & Optimize AI at Runtime

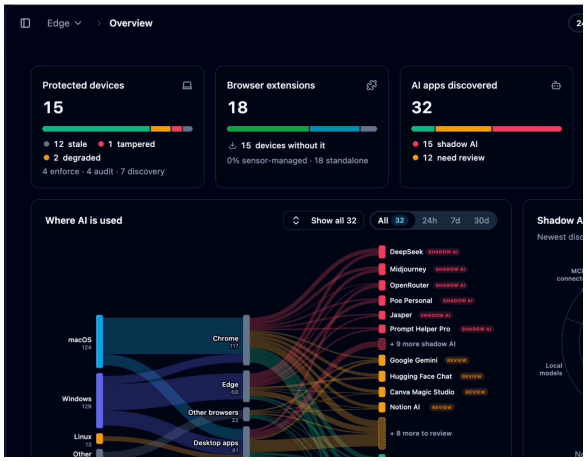

Audit & Optimize - Audit + Gateway + Compute: Investigate AI activity, maintain auditable evidence, enforce budgets and optimize model routing and inference costs.

Audit

Capture AI activity, investigate incidents, integrate with SIEM platforms and retain evidence for security operations, compliance and forensic review.

© OmniTrust Security LLC

Capability	Features & Outcomes
Halo Endpoint: Discover	Identify authorized and Shadow AI across supported devices and browsers. Build an AI Bill of Materials (ABOM), assess exposure and establish an enterprise inventory.
Halo Endpoint: Enterprise	Everything in Discover, plus continuous monitoring, policy enforcement, application controls and sensitive-data protection across supported endpoints.
Halo Gateway	Govern model and MCP tool access, protect credentials, enforce permissions and budgets, intelligently route requests and optimize AI spending.
Halo Audit	Centralize AI activity evidence, support forensic investigations, enable SIEM integration and provide reporting for security and compliance teams.
Halo Compute	Access competitively priced managed inference, retain existing model providers through BYOK, and choose supported private or sovereign infrastructure options.
Unified Control Plane	Manage AI policies, identities, organizational spending, reporting and administration from one platform, with optional ILM/PKI integration.

Built on Decades of Trust.

Engineered for the AI Era.

OmniTrust extends decades of cybersecurity, identity and PKI expertise into AI Lifecycle Management. **Halo discovers, secures, governs and audits enterprise AI**, while optimizing models and costs.

Our **ILM/PKI Agentic Identity Fabric** extends cryptographic trust to autonomous agents. **From silicon to cloud to autonomous AI. Trusted security across the entire lifecycle.**

HALO

Key Differentiators

Security without disrupting productivity

Identity Fabric + Trust Infrastructure ILM PKI

Discover First. Enforce When Ready

Identify Shadow AI, build ABOMs and assess exposure. Expand seamlessly to continuous monitoring, policy enforcement and data protection.

Control Spending. Optimize Models

Monitor AI consumption, enforce budgets and intelligently route workloads to balance performance and cost across preferred model providers.

Make AI Activity Accountable

Capture AI activity, investigate incidents, integrate with SIEM platforms and maintain evidence for security, compliance and forensic review.

Secure AI Without Vendor Lock-In

Keep familiar AI applications and preferred models while protecting credentials, enforcing access policies and securing connections to business tools.

OmniTrust secures the connected world, from silicon to cloud to AI - by delivering verifiable, enforceable trust across the full lifecycle. As the leader in Trust Lifecycle Management (TLM), OmniTrust protects over 2 billion devices and 3 billion software updates annually, extending trusted identity, security, and operational control from embedded systems to enterprise infrastructure and autonomous AI.
